

Kafka

Homework

Recap

1. Introduction to Kafka
2. Kafka Architecture
3. Installing Kafka
4. Configuring Kafka with Spring Boot
5. Advanced Kafka configuration
6. Kafka Schema Registry

Homework

1. Create an Ecommerce Application with OrderService and InventoryService. When the order is created in the OrderService, create an event in the order_created topic.
2. Consume this event in the InventoryService and reduce the stocks according to the order items. If the order is fulfilled create an event in the order_status_updated topic that marks the order status as FULFILLED. If the stocks cannot be reduced, create another event in the order_status_updated topic and mark the order status as OUT_OF_STOCK.

Homework

3. Consume the `order_status_updated` topic in the `OrderService` and update the order status in the orders DB.
4. Create a `Notification Service` in the `Ecommerce` application that listens to all the events created above and log all the events.
